

# TLX MultiCapture™

## Meeting customer specific needs

**Oslo, Norway (November 2008) - METTLER TOLEDO is pleased to introduce the new TLX MultiCapture™ dimensioning system to the market. Whether handling letters and flats or small items and big parcels, TLX will provide you with the dimensions, weight and identification of any object.**

With the production of the TLX MultiCapture™ METTLER TOLEDO has brought together its core competencies of dimensioning, dynamic weighing and application software. The result is a fully automatic, cost effective weighing and dimensioning platform which can be tailor built to suit customer specific needs.

“The TLX represents an evolutionary accumulation of 20 years of METTLER TOLEDO experience in capturing data for the transport and logistics industry. TLX is not only a dynamic weighing and dimensioning system it also optimizes reliability and lifetime service by use of proven components from the check-weighing industry.” says Einar Sørensen, R&D Manager at Mettler-Toledo Cargoscan.

### **A Fully Modular System**

Customers can choose from a fully automatic system or a validation option which gives the operator the chance to enter missing information. Embedded OCTO™ Data Capture Software, specially designed by METTLER TOLEDO CARGOSCAN can be configured to suit a wide range of applications. A unique feature of this software is that it runs across all hardware platforms. This provides flexibility in its adaptation to a highly diversified industry.

**Benefits for Carrier/Express/Post**

Revenue recovery is the underlying motivation behind dimensioning and weighing in the carrier, express, and postal industry. TLX will provide a complete data profile on any object scanned allowing for the correct invoicing of services provided. This not only increases revenue, but helps to optimize inventory control, save on operational costs and improve the flow of goods.

**TLX in the Warehouse**

Identifying the exact dimensions of items in a warehouse improves operations from the receiving to the shipping dock. Introducing a TLX™ Dimensioning System to your warehouse will eliminate any revenue gap between the amount you bill your customers and the amount your carriers charge. You will also improve space management, have the capability to create specific customer profiles, optimize packing and reduce the number of returned packages.

**Dimensioning the World**

Already, the biggest players in the Transport and Logistics Industry are choosing TLX. Systems are up and running in countries all over the world, from Switzerland to China, Mexico to France and Ireland to the United Arab Emirates.

**About METTLER TOLEDO CARGOSCAN**

METTLER TOLEDO CARGOSCAN is the leading supplier of precision dimensioning, weighing and identification technology for the Transport and Logistics Industry. Cutting edge technology and unprecedented service from METTLER TOLEDO's worldwide distribution network has made the company the preferred supplier of companies such as DHL, UPS, TNT, FedEx plus small carriers, warehouses and postal companies around the globe.
