

InPro® 6950 Gas/InPro® 6800 Gas

The O₂ sensor family for gaseous oxygen measurement

Technical Data

InPro 6950

InPro 6800 (25 mm)

Short description

The InPro O₂ gas sensor family provides the means for reliable inline measurement of gaseous oxygen in a wide spectrum of inertization, gas vent stream and CO₂ treatment processes. To meet the range of respective requirements, METTLER TOLEDO offers a selection of advanced sensors and measuring systems suitable for a variety of processes.

Outstanding features are:

- Inbeatable price-performance ratio
- Easy maintenance within five minutes
- Wide range of system components
- Use in hazardous areas (Gas and dust)
- Certified according ATEX and FM (InPro 6800 gas)
- ISM (Intelligent Sensor Management)

O₂ Sensor-Master InPro 6950/6800

The Sensor-Master serves to polarize the connected sensor in air as well as to check functioning of the sensor. Perfect operation of the Sensor-Master can also be verified through a self-check procedure.

O₂ Sensor-Simulator

The sensor simulator is used to perform a function check of transmitter and cable. It simulates the behavior of the sensor in air and in an oxygen-free medium.

InPro 6950 InPro 6800

Inner body

The inner body is the virtual heart of an oxygen sensor. Over and above that of the standard InPro 6800 version, the inner body of the InPro 6950 sensor is equipped with an ancillary annular protective cathode and reference to provide increased signal stability. This makes it possible to achieve detection limits of 5 ppm.

T-6800 Gas

Membrane body

Both the InPro 6800 Gas and the InPro 6950 Gas membrane bodies are PTFE-coated and are reinforced with a mesh, and therefore optimally protected against harsh pressure conditions.

Cap sleeve

In contrast to the cap sleeve Type N, the P version is equipped additionally with a protective cage and 3 standoffs to provide increased protection for the sensitive measuring tip of the O₂ sensor. Cap sleeves are supplied complete with material certificate.
