This User Manual is a brief instruction that provides information to handle with the first steps of the instrument in a safe and efficient manner. Personnel must have carefully read and understood this manual before performing any tasks.

1.2 Compliance information

European Union
The instrument complies with the directives and standards listed on the EU Declaration of Conformity.

United States of America
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
The FCC Supplier Declaration of Conformity is available online. ► http://www.mt.com/ComplianceSearch

2 Safety Information
Two documents named “User Manual” and “Reference Manual” are available for this instrument.
• The User Manual is printed and delivered with the instrument.
• The electronic Reference Manual contains a full description of the instrument and its use.
• Keep both documents for future reference.
• Include both documents if you transfer the instrument to other parties.
Only use the instrument according to the User Manual and the Reference Manual. If you do not use the instrument according to these documents or if the instrument is modified, the safety of the instrument may be impaired and Mettler-Toledo GmbH assumes no liability.
2.1 Definitions of signal warnings and warning symbols

Safety notes contain important information on safety issues. Ignoring the safety notes may lead to personal injury, damage to the instrument, malfunctions and false results. Safety notes are marked with the following signal words and warning symbols:

**Signal words**

- **DANGER**: A hazardous situation with high risk, resulting in death or severe injury if not avoided.
- **WARNING**: A hazardous situation with medium risk, possibly resulting in death or severe injury if not avoided.
- **CAUTION**: A hazardous situation with low risk, resulting in minor or moderate injury if not avoided.
- **NOTICE**: A hazardous situation with low risk, resulting in damage to the instrument, other material damage, malfunctions and erroneous results, or loss of data.

**Warning symbols**

- General hazard: read the User Manual or the Reference Manual for information about the hazards and the resulting measures.
- Electrical shock
- Notice

2.2 Product specific safety notes

**Intended use**

This instrument is designed to be used in laboratories by trained staff. The instrument is intended for weighing purposes. Any other type of use and operation beyond the limits of technical specifications without written consent from Mettler-Toledo GmbH is considered as not intended.

**Responsibilities of the instrument owner**

The instrument owner is the person holding the legal title to the instrument and who uses the instrument or authorizes any person to use it, or the person who is deemed by law to be the operator of the instrument. The instrument owner is responsible for the safety of all users of the instrument and third parties.

Mettler TOLEDO assumes that the instrument owner trains users to safely use the instrument in their workplace and deal with potential hazards. Mettler TOLEDO assumes that the instrument owner provides the necessary protective gear.

**Safety notes**

- **WARNING**

  **Death or serious injury due to electric shock**

  Contact with parts that carry a live current can lead to death or injury.
  1. Only use the METTLER TOLEDO power supply cable and AC/DC adapter designed for your instrument.
  2. Connect the power cable to a grounded power outlet.
  3. Keep all electrical cables and connections away from liquids and moisture.
  4. Check the cables and power plug for damage and replace damaged cables and power plugs.

3.2 User Interface

The screen displays information and allows the user to enter commands by tapping certain areas on its surface. You can choose the information displayed on the screen, change the balance settings and perform certain operations on the balance.
3.2.1 Main settings and activities at a glance
Depending on the application, the options available to be selected and their content may differ.
3.2.2 Application home screen

The application home screen appears after switching the balance on. It always displays the last application that was in use before the balance was switched off. The application home screen is the main screen of the balance. Every function can be accessed from here. You can return to the application home screen at any time by pressing the home button in the lower right corner of the screen.

3.2.3 Entering characters and numbers

The keyboard allows the user to enter characters, including letters, numbers and a range of special characters. If a barcode reader is connected to your balance and your sample provides a barcode, scan the product barcode instead of entering the designation manually (e.g. the ID can be scanned via barcode reader to ensure that the sample is clearly assigned to the corresponding product). Additionally, it is possible to connect a USB keyboard to enter the information.

3.2.5 Touch screen navigation

To interact with the balance, use the screen and the operating keys at the bottom of the screen.

**Using shortcuts**

To simplify navigation on the touch screen, there are a few shortcuts that provide quick access to key areas of the balance. For example, the weighing value field on the application home screen works as a shortcut (see screen below), as does the weighing unit next to the weighing value field. Other shortcuts may be available to use depending on the application.
Every setting that can be changed directly via shortcut, can also be changed in the main configuration settings for that application.

4 Installation and Putting into Operation

4.1 Selecting the location

A balance is a sensitive precision instrument. The location where it is placed will have a profound effect on the accuracy of the weighing results.

Requirements of the location

- Place indoors on stable table
- Ensure sufficient spacing
- Level the instrument
- Provide adequate lighting
- Avoid direct sunlight
- Avoid vibrations
- Avoid strong drafts
- Avoid temperature fluctuations

Sufficient spacing for balances: > 15 cm all around the instrument

Take into account the environmental conditions. See "Technical Data."

4.2 Unpacking

Open the balance packaging. Check the balance for transport damage. Immediately inform a METTLER TOLEDO representative in the event of complaints or missing accessories.
Retain all parts of the packaging. This packaging offers the best possible protection for transporting the balance.

4.4 Assembling the balance

⚠️ CAUTION

Injury due to sharp objects or broken glass
Instrument components, e.g., glass, can break and lead to injuries.
– Always proceed with focus and care.
Balances with a readability of 0.1 mg with draft shield (235 mm)
Place the following components on the balance in the specified order:
1. Push the side glass doors (1) back as far as they will go.
2. Insert the bottom plate (2).
3. Insert the draft shield element (3) and weighing pan (5) with pan support (4).

Balances with a readability of 1 mg, with draft shield (235 mm)
Place the following components on the balance in the specified order:
1. Push the side glass doors (1) back as far as they will go.
2. Insert the bottom plate (2).
3. Insert the weighing pan (4) with pan support (3).
Balances with a readability of 10 mg with square weighing pan and draft shield element
1. Remove the two screws (1).
2. Remove the plate (2) and retain it.
3. Place the draft shield element (3) and fix it with the two screws.
4. Place the pan support (4) with weighing pan (5).

Balances with a readability of 100 mg with square weighing pan
Place the following components on the balance in the specified order:
- Place the pan support (1)
- Place the weighing pan (2)

4.5 Putting into operation
4.5.1 Connecting the balance

⚠️ WARNING
Death or serious injury due to electric shock
Contact with parts that carry a live current can lead to death or injury.
1. Only use the METTLER TOLEDO power supply cable and AC/DC adapter designed for your instrument.
2. Connect the power cable to a grounded power outlet.
3. Keep all electrical cables and connections away from liquids and moisture.
4. Check the cables and power plug for damage and replace damaged cables and power plugs.

NOTICE
Damage to the AC/DC adapter due to overheating
If the AC/DC adapter is covered or in a container, it is not sufficiently cooled and will overheat.
1. Do not cover the AC/DC adapter.
2. Do not put the AC/DC adapter in a container.
1 Install the cables in such a way that they cannot be damaged or interfere with operation.
2 Insert the plug of the AC/DC adapter (1) in the power inlet of the instrument.
3 Screw the plug into the balance if applicable.
4 Insert the plug of the power cable into a grounded power outlet that is easily accessible.
⇒ The balance is ready for use.

Note
Always connect the AC/DC adapter to the balance before connecting to the power.
Do not connect the instrument to a power outlet controlled by a switch. After switching on the instrument, it must warm up before giving accurate results.

4.5.2 Battery operation
The balance can also operate with batteries, especially useful in the case of regular power outages. Under normal operation conditions, the balance works independently of the AC power line for up to 10 hours (using alkaline batteries). If the battery run time is not sufficient it is recommended to use lithium batteries (e.g., Energizer™ ULTIMATE LITHIUM), achieving a battery run time of more than 10 hours.
It is also possible to use rechargeable batteries. Charging batteries inside the balance is not possible.
Rechargeable batteries have a lower voltage of 1.2 V. Therefore, the battery indication shown on the balance might differ from the actual battery status.
Your balance uses 8 standard AA batteries (alkaline or lithium batteries preferred).
The Bluetooth dongle or other options only work when the balance is connected to the power supply and is not only powered by batteries.

Switch the balance on and off in battery operation
The balance must be switched on in battery operation with the Bat.ON switch on the rear of the balance. The key on the touch screen does not work, since the touch screen in the battery operation has no power supply in the extended state.
1 Press the Bat.ON switch on the rear of the balance to switch on the balance.
2 Press to switch off the balance.

Inserting / replacing batteries

⚠️ WARNING
Death or serious injury due to electric shock
Contact with parts that contain live current can lead to injury and death.
– Disconnect the instrument from the power supply when replacing batteries.

⚠️ NOTICE
Damage to the instrument
Do not place the instrument on the pan support location bolt.

Note
• Read and follow all warnings and instructions supplied by the battery manufacturer.
• Do not mix different types or brands of batteries. Performance of batteries varies depending on the manufacturer.
• Remove the batteries from the balance if the balance is not used for a long period of time.
• Batteries must be disposed of properly, according to local regulations.
  § Make sure that the balance is off before removing or inserting batteries.
1 Remove weighing pan, pan support and draft shield element or draft shield “100 mm” if present.
2 NOTICE: Damage to the instrument. Do not place the instrument on the pan support location bolt. Turn the balance carefully on its side.
3 Open and remove the battery-chamber cover.

4 Insert / replace the batteries with the correct polarity as shown in the battery holder.
5 Insert and close the battery-chamber cover.
6 Turn the balance carefully to its normal position.
7 Reinstall all components in the reverse order.
8 Press the Bat.ON switch on the rear of the balance to switch on the balance.

4.5.3 Switching on the balance
Before using the balance, it must be warmed up in order to obtain accurate weighing results. To reach operating temperature, the balance must be connected to the power supply for at least 30 minutes (60 minutes for 0.1 mg models).
  § The balance is connected to the power supply.
  § The balance is warmed up.
  – Press $\bigcirc$.
      $\Rightarrow$ After the start screen has disappeared, the application home screen will open.

When the balance is switched on for the first time, the Weighing application home screen will open. If the balance is switched on again, it will always start with the screen of the application last used before switching it off.

4.5.4 Changing the date and time

Navigation: $\bigcirc$ > $\bigcirc$ General configuration > System settings > Date and Time

The dialog (Picker view) allows the user to set the date and time.
Tap ☐ for Time and ☑️ for Date. The format can be selected by tapping ✅.

4.5.5 Leveling the balance

Exact horizontal and stable positioning are essential for repeatable and accurate weighing results.

The balance can be levelled using the leveling assistant and/or the level indicator in front of the balance. There are two adjustable leveling feet to compensate for slight irregularities in the surface of the weighing bench.

The balance must be leveled and adjusted each time it is moved to a new location.

Balances with two levelling feet

1. Position the balance at the selected location.
2. Align the balance horizontally.
3. Turning the two front leveling feet of the housing until the air bubble is in the middle of the glass.

Balances with four levelling feet

1. First turn the two rear leveling feet all the way in.
2. Adjust the two front leveling feet as previously described.
3. Turn the rear leveling feet down onto the surface for extra stabilizing safety, so the balance cannot tilt over under eccentric loads.
Example
Air bubble at 12 o'clock: turn both feet clockwise.

Air bubble at 3 o'clock: turn left foot clockwise, right foot counterclockwise.

Air bubble at 6 o'clock: turn both feet counterclockwise.

Air bubble at 9 o'clock: turn left foot counterclockwise, right foot clockwise.

4.5.5.1 Leveling the balance using the leveling assistant

When the balance is switched on at its new location, the symbol \(\text{The instrument is out of level}\) appears in the status information field on the left of the screen.

1. Tap \(\text{The instrument is out of level}\).
2. Select \(\text{The instrument is out of level}\).

The function \(\text{Leveling assistant}\) is a step-by-step guide that helps to level the balance.

Navigation: \(\text{Quick settings/Preferences} \rightarrow \text{Leveling assistant}\)

After following the instructions, the leveling assistant will display the next steps. Follow the steps until the balance is level.

Note
Always use the physical air bubble on the level indicator as a reference. If the physical air bubble is centered, but the symbol \(\text{The instrument is out of level}\) still appears on the screen, please consider performing a central adjustment of the level indicator, see System settings.

4.5.6 Adjusting the balance

To obtain accurate weighing results, the balance must be adjusted to match the gravitational acceleration at its location. This is also dependent on the ambient conditions. After reaching the operating temperature, it is important to adjust the balance in the following cases:

- Before the balance is used for the first time.
- If the balance has been disconnected from the power supply or in the event of power failure.
- After significant environmental changes, e.g., temperature, humidity, air draft or vibrations.
At regular intervals during weighing service. For further information, consult the Reference Manual (RM).

4.6 Performing a simple weighing

Navigation: \( \mathbb{F} \) > ☑ Activities - Weighing applications > ☑ Weighing

This section describes how to perform a simple weighing operation. The basic navigation concept and the basic functions of the balance are also explained.

When you switch on the balance for the first time, the Weighing application home screen opens automatically. If the balance has already been used, the application that was last used before the balance was switched off will open. If another application is running, switch to Weighing.

1. Press \( \rightarrow \text{O} \leftarrow \) to zero the balance.
2. Place the sample on the weighing pan.
   - The instability symbol \( \circ \) appears and the value in the weighing value field becomes light blue.
3. Wait until the instability symbol \( \circ \) disappears and the value in the weighing value field becomes dark blue again.
   - The weighing process is complete.
   - The results are now displayed.

Zeroing

Use the \( \rightarrow \text{O} \leftarrow \) zeroing key before starting to weigh anything.

1. Unload the balance.
2. Press \( \rightarrow \text{O} \leftarrow \) to zero the balance.
   - All weight values are measured in relation to this zero point.

Taring

If you are working with a weighing container, tare the balance.

1. Place a container on the weighing pan.
   - The weight is displayed.
2. Press \( \rightarrow \text{T} \leftarrow \) to tare the balance.
   - 0.000 g and Net appears in the display. Net indicates that all weight values displayed are net values.

Weighing

- Place the sample in the container.
  - The results are now displayed.
- If the container is removed from the balance, the tare weight will be shown as a negative value.
- The tare weight remains stored until the \( \rightarrow \text{T} \leftarrow \) key is pressed again or the balance is switched off.

Switching off

1. Press and hold \( \bullet \) until the dialog Switch-off appears.
2. Tap \( \checkmark \) to confirm.
   - The balance switches off and enters standby mode.
   - After switching on from standby mode, the balance does not need to warm up. It is immediately ready to start weighing.
   - If the balance has been switched off manually, the display will also be off.
   - To switch off the balance fully, it must be disconnected from the power supply.
4.7 Transporting, packaging and storage

**CAUTION**

Injury due to sharp objects or broken glass

Instrument components, e.g., glass, can break and lead to injuries.
– Always proceed with focus and care.

1. Press and hold the key.
2. Disconnect the balance from the AC/DC adapter.
3. Disconnect all interface cables.

4.7.1 Transporting over short distances

To move the balance over a short distance to a new location, follow the instructions below.
1. Hold the balance with both hands as shown.
2. Carefully lift the balance and carry the balance in horizontal position to the new location.

If you want the balance put into operation, proceed as follows:
1. Connect in reverse order.
2. Level the balance.
3. Perform an internal adjustment.

4.7.2 Transporting over long distances

To transport the balance over long distances, always use the original packaging.

4.7.3 Packaging and storage

**Packaging**

Store all parts of packaging in a save place. The elements of the original packaging are developed specifically for the balance and its components to ensure maximum protection during transportation or storing.

**Storage**

Store the balance under following conditions:
• Indoor and in the original packaging.
• According to the environmental condition, see "Technical data*.
• When storing for longer than six months, the rechargeable battery maybe down (date and time get lost).

5 Maintenance

To guarantee the functionality of the balance and the accuracy of the weighing results, a number of maintenance actions must be performed by the user.

5.2 Cleaning

5.2.1 Cleaning the glass draft shield (0.1 mg and 1 mg models)

**CAUTION**

Injury due to sharp objects or broken glass

Instrument components, e.g., glass, can break and lead to injuries.

- Always proceed with focus and care.

1. Turn the two lock covers (1) on the front.
2. Push the side glass doors back.
3 Tilt the front glass.
4 Remove the front glass.

5 Pull the top glass door out.
6 Lift the side glass doors and pull them out.

7 Push the lock button to release the rear glass.

8 Remove the rear glass.
9 Remove weighing pan, pan support and bottom plate. After cleaning, reinstall all components in the reverse order. For balance mounting, refer to "Assembling the balance".

5.2.2 Cleaning the balance

**WARNING**

**Death or serious injury due to electric shock**
Contact with parts carrying a live current can lead to injury and death.
1 Disconnect the instrument from the power supply prior to cleaning and maintenance.
2 Prevent liquid from entering the instrument, terminal or AC/DC adapter.

**NOTICE**

**Damage due to improper cleaning**
Improper cleaning can damage the load cell or other essential parts.
1 Do not use any cleaning agents other than the ones specified in the "Reference Manual" or "Cleaning Guide".
2 Do not spray or pour liquids on the instrument. Always use a moistened lint-free cloth or a tissue.
3 Always wipe out from inside to outside of the instrument.

**Cleaning around the balance**
- Remove any dirt or dust around the balance and avoid further contaminations.

**Cleaning the removable parts**
- Clean the removed part with a damp cloth or a tissue and a mild cleaning agent.

**Cleaning the balance**
1 Disconnect the balance from the AC/DC adapter.
2 Use a lint-free cloth moistened with a mild cleaning agent to clean the surface of the balance.
3 Remove powder or dust at first with a disposable tissue.
4 Remove sticky substances with a damp lint-free cloth and a mild solvent.

**Note**
Useful details to avoid soiling the instrument are described in the Mettler-Toledo GmbH "SOP for Cleaning a Balance".
5.2.3 Putting into operation after cleaning

1. Reassemble the balance.
2. Check the functionality of the draft shield.
3. Press \( \text{on} \) to switch on the balance.
4. Warm up the balance. Wait 1h for the acclimatization, before starting the tests.
5. Check the level status, level the balance if necessary.
6. Perform an internal adjustment.
7. Perform a routine test due to the internal regulations of your company. METTLER TOLEDO recommends to perform an repeatability test after cleaning the balance.
8. Press \( \rightarrow 0 \rightarrow \leftarrow \) to zero the balance.

\( \Rightarrow \) The balance has been putting into operation and is ready to use.

6 Troubleshooting

For a detailed description of the causes of errors and how to remedy them, refer to the Reference Manual (RM). The most common ones during installation of the balance are listed below.

Possible errors with their cause and remedy are described in the following chapter. If there are errors that cannot be corrected through these instructions, contact METTLER TOLEDO.

### 6.4 Putting into operation after fixing an error

After fixing an error, perform the following steps to put the balance into operation:

- Ensure that the balance is completely reassembled and cleaned.
- Reconnect the balance to the AC/DC adapter.

7 Technical Data

7.1 General data

**Standard power supply**

- AC/DC adapter:
  - Primary: 100 – 240 V– 0.5 A, 50 – 60 Hz
  - Secondary: 12 V 1.0 A MAX 24 – 34 VA LPS (Limited Power Source), SELV (Safety Extra Low Voltage)

- Balance power consumption: 12 V DC, 0.84 A

- Polarity:

- Mean sea level:
  - Can be used up to 2000 m above mean sea level
  - If the balance is used above 2000 m mean sea level, the optional power supply must be used

- Battery operation:
  - 8 standard AA batteries (alkaline or lithium) for up to 10 hours of use

**Optional power supply**

- AC/DC adapter:
  - Primary: 100 – 240 V– 0.8 A, 50 – 60 Hz, 60 – 80 VA
  - Secondary: 12 V DC, 2.5 A LPS (Limited Power Source), SELV (Safety Extra Low Voltage)

- Cable for AC/DC adapter: 3-core, with country-specific plug

- Polarity:

**Protection and standards**

- Overvoltage category: II
- Degree of pollution: 2
- Protection: Protected against dust and water
- Standards for safety and EMC: See Declaration of Conformity
- Range of application: Use only indoors in dry locations

**Environmental conditions**

- Height above mean sea level:
  - Up to 2000 m (Standard power supply)
  - Up to 4000 m (Optional power supply)

- Ambient temperature:
  - Operating conditions for ordinary lab application: +10 to 30 °C (operability guaranteed between +5 and 40 °C)
  - Max. 80% up to 31 °C, linearly decreasing to 50% at 40 °C, noncondensing

- Relative air humidity:

- Warm-up time:
  - At least 30 minutes (60 minutes for 0.1 mg models) after connecting the balance to the power supply. When switched on from standby, the instrument is ready for operation immediately.
**Materials**

**Housing:**
- Top Housing: Plastic (ABS)
- Bottom housing: Die-cast aluminum, powder coated

**Weighing pan:**
- 170 × 190 mm: Stainless steel X5CrNi18-10 (1.4301)
- Ø 120 mm: Stainless steel X5CrNi18-10 (1.4301)
- Ø 90 mm: Stainless steel X2CrNiMo 17-12-2 (1.4404)
- Roughness Ra < 0.8 μm

**Draft shield element:**
- 0.1 mg models: Stainless steel X2CrNiMo 17-12-2 (1.4404)

**Draft shield:**
- Plastic (ABS), glass

**Protective cover:**
- Plastic (PET)

**TFT touch screen surface:**
- Glass

**8 Disposal**

In conformance with the European Directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE) this device may not be disposed of in domestic waste. This also applies to countries outside the EU, per their specific requirements.

Please dispose of this product in accordance with local regulations at the collecting point specified for electrical and electronic equipment. If you have any questions, please contact the responsible authority or the distributor from which you purchased this device.
