

Weighing. Advising. Advertising.

Standard software for METTLER TOLEDO PC scales

UC3 software is the powerful scale software for METTLER TOLEDO PC scales of the UC3 Line and UC Evo Line model families. With the UC3 software, METTLER TOLEDO PC scales come factory-equipped with a wealth of proven and practical functions that make your weighing and operating processes easier and more efficient – whether at the sales counter, in pre-packing or at the self-service scales.

In addition to the mounting configurations and equipment options to support the UC3 software, there is a wide selection of applications and optional software enhancements. In total, there is broad flexibility to adapt the scale solution to your individual needs.

Easy and quick weighing

The basis for your sales success

Quick operation

Counter sales cannot afford waiting times. Whether it's fast article searching via the intuitive, easy-to-operate touchscreen or rapid access to convenience functions thanks to interactive and context-sensitive menu guidance: The UC3 software is consistently oriented in its functionality and operation to rapid weighing and the operating processes.

Flexible prepacking

Self-service fresh products support the service counter as a convenient alternative for customers who are especially rushed in their shopping. Automatic and manual weighing, alternatively with or without push-button operation, convenient receipt classification, batch mode, re-weighing and retroactive price calculation – the UC3 software leaves nothing to be desired in prepacking whether in the backroom or during the times when business is slower at the service counter.

Easy self-service weighing

Comparing apples and oranges? During self-service weighing, the UC3 software supports article selection via numerical input, alphanumeric text search – or very conveniently by quickly and easily touching the product symbol of the desired article or product group. The automatic zeroing when there is an underload or alternatively an acoustic alarm ensure safe self-service operation.

Rapid inventory

The UC3 software provides you with new types of inventory to choose from, accompanied by practical additional functions such as posting to inventory acquisition memory, separate inventory ticket, immediate printout of each registration or the convenient temporary storage of totals and subtotals when there are pauses and work interruptions.

Article selection made easy

Self-service weighing by product symbol

Advertising to make you hungry

Increased sales with visual promotions to entice the shopper

Qualified advice

Questions about the product line? With the UC3 software, you can store product related information and guided responses to customer questions. This makes your employees ready to provide information at any time. Or you can decide on the optional Fresh Look Advisor application – an interactive and tremendously convenient assistance solution that gives your employees much greater capability to advise customers.

Better advertising

Many consumers make impulsive buying decisions. Visual sales promotions on the scale screen reach your customers at the right moment. The UC3 software supports the display of images in standard file formats. With the Fresh Look Promoter, METTLER TOLEDO further provides you with a powerful application that enables you to conveniently manage visual sales promotions and to increase high-margin cross-selling with text, images, animation and videos.

Detailed evaluation

Fast moving products or slow sellers? The freely combinable reports of the UC3 software give you detailed views of your sales numbers in seconds. Especially convenient: All reports can be printed out directly at the scale.

Fast installation

- Easy integration into your IT environment
- StartUp wizard for rapid startup and adaptation to the sales environment
- High efficiency via storage of profile-based configurations
- Data supply and removal via XML interface

Convenient data management

- Master Database Service for convenient automatic data synchronization in the scale network
- Automatic data restoration if a device fails
- Data changes such as management of new articles or price changes directly at the scale or via centralized systems

Optimized accessibility

- Avoidance of business interruptions thanks to preventive fault monitoring
- Notification of calibration date
- Notifications about regular service periods for wear parts
- Time-controlled updates during ongoing operation

Supported image formats

- jpg, gif, bmp

Sustainable technology

- Automatic shutdown of the scale
- Manual or time-controlled dimming of the screens during operating pauses
- Energy-saving modes for touch-screen and customer screen can be controlled separately

Browser integration

- Display of status-dependent contents
- Ideal for Intranet/Internet applications

InTouchSM Remote Services

- Remote Help function on the scale
- Remote Help Desk
- Remote monitoring, remote diagnostics, remote maintenance
- Remote assistance
- Remote data transmission
- Equipment inventory management

Services

- Individualized software adaptations available on request
- Regular software updates and updates via maintenance contract
