Hardware & software

Unattended Scale Kiosks are extremely reliable.

Our unattended solutions allows transactions to proceed with minimum scale operator intervention. Gates and lights can be controlled and messages can be displayed to the driver as they approach the scale and while they're on the scale. Return on investment for an unattended ticketing solution is often measured in months. Several different designs are available depending on your application. An experienced sales engineer will provide assistance in selecting the correct kiosks to fit your needs.

Proven Hardware

Many of these kiosks are installed in extreme weather environments. They are designed to withstand the cold of Minnesota and North Dakota, as well as the heat and humidity of the southern states such as Texas and Arkansas. Unattended kiosks are designed for use in nearly any climate, environment, or conditions.

Proven Agribusiness Software Solutions

Greenstone Systems provides software systems to help agribusinesses of all types and sizes manage data, streamline processes, and enhance business analysis and decision making. From pre-sale system advice to post-sale training and support, you receive a complete technology solution to improve efficiency, productivity, and profitability across your agribusiness.

Inbound Scale/Probe Kiosk

Initial Inbound Transaction, with optional phone, intercom and keypad. Shown here with swivel pedestal with kiosk guard to protect valuable kiosk hardware.

Touchscreen Kiosk with Printer

with a proven track record

Why Choose an Unattended Scale Kiosk?

- After hours operation with less overhead
- Unattended never calls in sick
- Faster transactions lead to higher throughput
- Fewer transaction errors build better customer relations
- Drivers can process transactions without ever having to leave their truck.
