

Cylindrical Stainless Steel Weights

Simple, Quick, and Precise Testing

Top Quality

METTLER TOLEDO puts the highest demands on the quality of its products. Each step in production is strictly controlled, from the original steel billet to the finished weight.

Simple Handling

Straightforward crane attachment assures quick and efficient weight handling for all applications. No special handling tools are required: the weights connect directly to the most commonly-used cranes.

Impeccable Finish

A mirror-polished surface makes the weights easy to clean and provides the best possible corrosion resistance. This ensures near-perfect stability over the weight's entire life span.

The Classic Test Method For Reliable Mass Determination

METTLER TOLEDO's heavy-capacity cylindrical weights are available in nominal values from 100 kg to 2000 kg, satisfying the maximum permissible error standards for OIML classes F1 and F2.

These classic cylindrical weights are easy to handle, with an eye bolt in the center for lifting. This arrangement is ideal for users who do not need to stack weights for different mass combinations. A preferred solution for calibration laboratories and all industries which require non-porous and wash-down capable test equipment.
