

DataBridge™ Software

For Improved Waste Logistics

Q: "Traffic at our waste facility often gets backed up, and transactions can be difficult to track, is there a better way?"

A: "Yes, DataBridge™ Software Solution offers sophisticated capabilities to improve your work-flow and desired outcome at the point of vehicle transaction in your Waste Facilities."

Let's look at some key benefits you can achieve by implementing DataBridge™ at your waste operation.

Improved Traffic Management

- Keep traffic moving over your vehicle scales
- Drivers can identify themselves at the terminal, complete their weighing transaction, and receive a printed ticket all without leaving their truck
- Higher productivity and reduced operating costs
- Process trucks up to 30% faster

Advanced Pricing Capabilities

- Set standard material rates per unit of weight, per load, or by quantity and total costs will be calculated
- Tiered pricing allows you to assign different prices to a series of weight ranges
- Peak pricing allows you to set higher prices for your busiest hours of the day allowing you to maximize your profit potential

Data Reporting Flexibility

- Consolidate and analyze data between multiple local municipalities or even across regions
- Create custom reports specifically for your operation to track daily throughput or sustainability targets
- Central management can utilize advanced reporting features to make company-wide improvements to operational efficiency
- Identify which locations bring in the most revenue or determine peak times
